

Jerguson's Tri-Magnet Level Switches deliver failure-free performance.

(Series JX)

(Series JB)

The innovative use of repelling magnetic fields eliminates springs and other mechanical elements that are prone to failure in high temperatures, extreme vibration, or simply fatigue over time.

FEATURES

- Tri-Magnet Switching for Unparalleled Reliability
- Vibration Resistant
- Sealed or Flanged Cage
- 316 Stainless Steel Trim
- ASME B31.1 & B31.3 Design

**Unique 3 magnet latching.
No springs...No problem.**

"The new switches are very rugged and dependable, and most importantly, they are mercury-free and safe for the environment. Dealing with spilled mercury is an extremely difficult task, but it is one we don't have to worry about with these new switches. The Jerguson Tri-Magnet Level Switches have been in operation in our facility since May 2007."

*-Maintenance Superintendent,
Major Utility Power Generation Plant*

The Tri-Magnet Level Switch was endurance tested to over 850,000 cycles without failure.

JERGUSON® LEVEL SWITCHES THE SWITCH MECHANISM

Principle of Operation

The switch mechanism is based on a unique three-dimensional magnet design where the snap action is accomplished by the utilization of magnetic repulsion and attraction. The primary magnet mounted on the float rod causes the secondary magnet to rotate as it passes up and down. The tertiary switch magnet is repelled by the secondary and snaps to the opposite side. This causes the cradle to pivot, moving the push rods, which operate the switch contacts. The result is positive snap action interlock switching...**no springs...no spring problems!**

Schematic showing three-magnet system

Type	Choice of Switch Mechanisms
	Application
X4, X8	General purpose - 10 amp mechanisms for general purpose duties up to 480°F
D4, D8	High temperature - 5 amp mechanisms for high temperature applications up to 750°F
H4, H8	Hermetically sealed - 5 amp mechanisms suitable for temperatures up to 480°F, contaminated atmosphere environments and intrinsically safe circuits. All moving parts and contacts enclosed in an inert gas filled stainless steel enclosure.
P4, P8	Low current - 0.25 amp gold-plated contact switch mechanism for use in intrinsically safe or low power circuits up to 750°F
E4, E8	Encapsulated - 5 amp switch mechanism is sealed / encapsulated inside aluminum housing, suitable for temperatures to 850°F

THE FLOAT CHAMBER

Applications

The flanged chamber construction of this X series range of vertical controls makes them a very serviceable level control solution for petrochemical, power generation and OEM applications.

The unique three-magnet system provides reliable switching for applications such as level alarm, safety shutdown and pump control in product storage tanks, gas scrubbers, process vessels, and high pressure steam generators.

Single or multi-switch models are available. Chambers are designed to ASME B31.1, Power Piping Code, and ASME B31.3, Chemical Plant and Petroleum Refinery Piping Code.

Options:

- Stainless Steel Chamber
- Low temperature chamber below -20°F
- High temperature chrome-moly chamber
- Certified to B31.1 or B31.3
- Non-destructive testing: radiographic, ultrasonic, magnetic particle, dye penetrant
- Epoxy paint finish (FP-18)
- Extended NEMA 4 switch enclosure housing up to 3 SPDT switch mechanisms or 3 DPDT switch mechanisms
- Vent connection
- Specific gravity below .35
- NACE specification MR-0175

DIMENSIONAL AND OPERATING LEVEL DATA

OUR WARRANTY

All mechanical level devices are warranted free of defects in materials and workmanship for five years from the date of original factory shipment.

If returned within the stated warranty period, and upon factory inspection the cause of the claim is determined to be covered under the warranty, at option, the device will be repaired or replaced without cost to the purchaser (or owner), other than transportation.

Jerguson® shall not be liable for mis-application, labor claims, direct or consequential damage or expense arising from the installation or use of the equipment. There are no other warranties expressed or implied.

NUMBER OF SWITCH MECHANISMS

Specify No. of Switches Required (1,2)

NOTES:

- Code design standard on all chambers unless otherwise specified.
- Code radiography is available upon request.
- Main Chamber:** Circumferential welds between center pipe & pipe cap(s), and weld neck chamber flange ("X" style 'Chamber Design' only), are full penetration, single-V, butt welds.
- Process Connections:** Immediate branch is an o'let. For flanged connections, when selected, a 1" NPS nipple is welded to the o'let, and slip-on flanges are welded to the nipple, as standard.
- Welders qualified to ASME IX. PWHT available upon request.

SG 0.40

High Pressure
ASME Class 900, 1500, 2500
SG 0.40

Direct Mounting
ASME Class 150, 300, 600
SG 0.40

You can rely on us

The Jerguson range of liquid level controls is designed for operation in a wide variety of applications.

Typical Applications

Separators	Water Sumps
Compressors	Scrubbers
Knock Out Pots	Fractioning Columns
Condensors	Process Vessels
De-actuators	Condensate Tanks
Storage Tanks	Drainpots
Service Tanks	Accumulators
Header Tanks	Flush Vessels
Effluent Sumps & Tanks	Fuel Tanks
Heat Exchanger	Feedwater Heaters
Lube Oil Tanks	Surge Drums

Jerguson level switches are used for the control of liquids by companies all over the world.

Shell	Bechtel
Exxon	Bellili
Amoco	Ontario Hydro
Fluor	Nissaci-Sangyo
Hyundai	Foster Wheeler
Hitachi	Siemens
British Petroleum	Mannesmann-Demag
Mobil	Catalytic
Texaco	Techni
Ingersoll Rand	Technipetrol
Compare	Nuovo Pignone
Honeywell	Dresser
